# shelter

les

lightweight efficient shelter

The Lightweight Efficient Shelter is functional in many different operations, in both warm and cold climates. Made from rip-stop fabrics and fibre glass rods, this tent gains both strength and mobility characteristics.

The cone ends of the tent offer spacious storage rooms, and the sleeping compartment comes with integrated flooring. LES is the tent for families, and for professionals.

The main cabin comes with an inner tent with integrated, durable PVC-coated flooring.

The tent is prepared with a chimney apron for heating sources. The LES is a spacious and comfortable accommodation unit.

Single cover for the entrance and storage area and inner lining for the accommodation area offer high comfort level in both hot and cold climates. Zipdoors and integrated PVC-coated flooring provide a reptile-free interior.
