multi purpose tent

shelter and protection solutions

shelter

Initially, the Omega was designed as a hospital tent, and it still covers several of field hospital tentage functions. But it's suitability as class room/school building, office or recreation area has been appreciated by increasing number of organisations.

The Omega forms an integral part of NORHOSP, the Norwegian Field Hospital, deployed in several IFRC operations world wide. The simplicity in erecting the tent and the flexibility with regard to openings is often recognised and commented by field workers.

Operational needs in countries like Angola, Mozambique, Rwanda, Burundi, Sierra Leone, Peru Indonesia, East Timor and India have been covered by the Omega tent solution.

Omega is one of the items that ROFI Industrier keep in stock through our commitment in NOREPS, Norwegian Emergency Preparedness System. 24 hours a day, 365 days a year, we are able to deliver the NOREPS commodities to an international airport within 24 hours, and upon several occasions we have accordingly performed. Our technicians are available for organising and supervising partial or complete turn-key projects in the field. This professional assistance is also available 24 hours a day, year around.

ROFI Industrier as represents more than 60 years of experience within the textile industry. A comprehensive integration with our suppliers and partners enable us to meet the requirements for progressive development, system solutions and a stock-hold of selected items. We continuously maintain our certificate covering quality assurance/quality control.
